

I - Solar - Liquid for cleaning photovoltaic panels

I - Solar

High-performance agent for contactless cleaning of solar panels and photovoltaic panels.

Effectively removes operational dirt (soot, dust, or debris), preventing a decrease in the efficiency of the panels.

How to use:

The agent should be diluted, mixing 1L of the preparation with 5L - 20L of water, depending on the intensity of the dirt. Then evenly spray the cleaned surface using a manual sprayer or a pressure sprayer, not exceeding a pressure of 2 atmospheres. Wait for a few to several minutes for more stubborn dirt. Then rinse thoroughly with water. In the case of particularly stubborn dirt, repeat the process. Note: Do not apply to hot or sun-exposed surfaces. Do not allow the product to dry on the surface.
